

Openfeign 적용하기

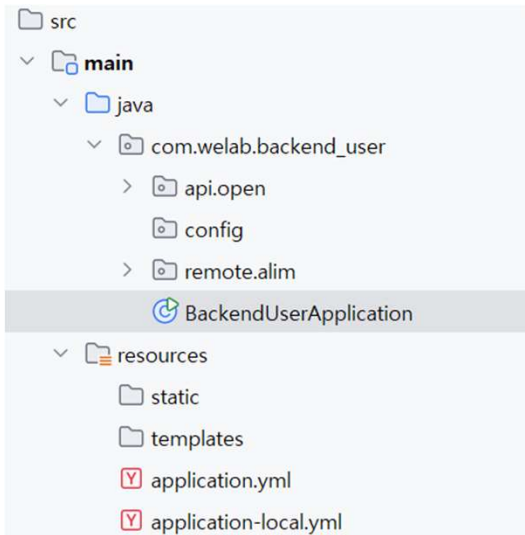

RestTemplate을 간편하고 간단하게 사용하기 위함

User, Alim 프로젝트 의존성 추가

```
dependencies {  
    implementation 'org.springframework.boot:spring-boot-starter-web'  
    implementation 'org.springframework.cloud:spring-cloud-starter-loadbalancer'  
    implementation 'org.springframework.cloud:spring-cloud-starter-netflix-eureka-client'  
    implementation 'org.springframework.cloud:spring-cloud-starter-openfeign'  
    compileOnly 'org.projectlombok:lombok'  
    annotationProcessor 'org.projectlombok:lombok'  
  
    testImplementation 'org.springframework.boot:spring-boot-starter-test'  
    testRuntimeOnly 'org.junit.platform:junit-platform-launcher'  
}
```

User, Alim Application에 어노테이션 추가

```
@EnableDiscoveryClient
@EnableFeignClients
@EnableSpringBootApplication
public class BackendUserApplication {

    public static void main(String[] args) {
        SpringApplication.run(BackendUserApplication.class, args);
    }

}
```

User 프로젝트 코드 작성

RestTemplate -> FeignClient 이용으로 변경

[API]
+ "backend - alim"
+ "/backend/alim/v1/**" API

`@FeignClient(name = "backend-alim", path = "/backend/alim/v1")`

```
public interface RemoteAlimService {  
    @GetMapping(value = "/hello")  
    public String sms();  
}
```

```
    @PostMapping(value = "/sms")  
    public SendSmsDto.Response sendSms(@RequestBody SendSmsDto.Request request);  
}
```
